# THE SUTTON TRUST CHAMPIONS SOCIAL MOBILITY THROUGH PROGRAMMES, RESEARCH AND POLICY INFLUENCE

#### **25 years of the Sutton Trust**

A new data asset on equality and fair access and how it can inform on long-term trends.

Dr Mark Corver, Founder and MD, dataHE

Key findings for Sutton Trust, 13 April 2023

dataHE

Page **1** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

# What this project does

The Trust has always been distinctive by being anchored in data and evidence.

SUTTON TRUST

#### 25 years of the Sutton Trust

The equality and fairness of young university entry: What the data says about how it has changed since the Trust started, and what the future holds

Revised proposal for Sutton Trust Mark Corver, dataHE. February 2022 (additions April 2022) But the public data on equality and fair access is sparse, fragmented and increasingly lost.

This project does two things:

(i) Recovers these data into a analytically strong data base

(ii) Uses it to take long-term view on equality and fair access

### Some headlines

You have a data asset containing processed aligned public data on equality and fair access back to 1997.

Distributional fair access has been stubborn.

Trust focus, school type has seen some proportional improvements, though the "3,000" figure is up.

For areas and social class, no material improvement.

Young application and entry rates have both increased, with real reductions in inequality by area groupings.

But entry inequality on other dimensions, sex and ethnic group has been growing.

#### What we will be covering today

dataHE

Page **4** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

#### (1) Data asset

Page **5** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

#### What has been created?

| Dimension     | Population | Entrants<br>(sector) | Entrants<br>(university) |
|---------------|------------|----------------------|--------------------------|
| Neighbourhood | Yes        | Yes                  | Yes                      |
| Region        | Yes        | Yes                  | Yes                      |
| Ethnic group  | Yes        | Yes                  | Yes                      |
| Sex           | Yes        | Yes                  | Yes                      |
| School type   |            | Yes                  | Yes                      |
| Social class  |            | Yes                  | Yes                      |

Page **6** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

# **Populations: Region and sex**

18 year old women by selected region School aligned population

Region and sex come from our core work on populations.

ONS MYEs and projections (prepandemic referenced), aligned to match --South West University cohort definitions.

Page **7** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

# **Populations: POLAR**

For POLAR we start with published national estimates.

We model (forward, and back) by projecting cohort proportion changes.

Page **8** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

### **Population shares: POLAR4 Q1**

For fair access we look at proportions of entrants population can matter here.

For POLAR4 Q1 can take as near constant over the period, it is not a major influence.

Page **9** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

# **Populations: ethnic group**

Page **10** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust For ethnic group we start with published whole-population summary-level (i.e. not state school) *UK* estimates.

APS typical-motherage data then used to redistribute to country

Modelling (forward and back) by cohort share projection.

# Entrants (sector): equality

P4 Q1 entrants by sex England MLX entrants, cumulative 30,000 Women 28,000 26,000 24,000 22,000 20,000 18,000 16,000 14,000 12,000 Men 10,000 8,000 6,000 4,000 2,000 0 2008 2015 2009 2010 2012 2014 2016 2018 2019 2020 2022 023 024 025 020 2007 2011 2013 2017 2021

#### Widening participation summary: UK Performance Indicators

22 February 2022

Important - Changes to the UKPIs from 2020/21
Changes to definitions mean that the latest UKPI data differs from previous years' data. Expand this box for more
information.

 Impact of COVID-19 on UKPIs

There are known areas in which the pandemic has had some impact on the 2019/20 and 2020/21 Student data Expand this box for more information.

This summary contains overview information on: <u>State school marker | Low participation</u> <u>neighbourhoods | Disabled Students' Allowance</u> for 2015/16 and 2020/21.

#### UK Performance Indicators 2002/03: Widening participation

Release date: 30 September 2004

Our widening participation Performance Indicators explore the extent of specific groups' participation in higher education. Tables document the percentage of students:

- From state schools or colleges
- From specified socio-economic classes
- From low-participation neighbourhoods

Report 99/66

December 1999

Performance Indicators in Higher Education in the UK

**Note:** This report is available in three parts. There are separate files for the <u>main text</u> of the report, the <u>Tables of indicators</u> and the <u>Annexes</u>. (600K). Printed copies of the report are <u>available from HEFCE</u>, price £25.

Page **13** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

We use the official Performance Indicator sequence for long-run fair access.

Very difficult to recover. Multiple sources. Multiple formants. Specialised archives for earlier years.

Covers 1997 to 2020 (23 years)

### Young entrants in the Pls

dataHE

Page **14** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

# Neighbourhood: raw measures

Four measures through time.

A **narrowly based** measure in the PIs – e.g. just POLAR4 Q1 (20% of population)

dataHE

Page **15** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

### Neighbourhood: consistent share

Using data overlaps and models we are able to remap the old definitions to the most recent (Q1 POLAR 4) to give a consistent entrant share measure

(Scottish providers dropped here as POLAR data for them suppressed in PIs)

Page **16** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

## Neighbourhood: consistent numbers

This also gives us a count of entrants on the same consistent basis.

All these items are in the data asset.

Page **17** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

### Social class: consistent share measure

FD/T1a/English providers/Low social class: social\_class\_type

FD/T1a/English providers/Low social class: social\_class\_type

2009 2010 2011

2013' 2014'

2012

dataHF

-ADJUSTED SEC

A similar process is used to get a consistent measure for parental occupational background ('social class'). These data only run 1997 to 2014 (18 years). Balanced measure in the PIs (around 40% of population)

### School type: broad based

FD/T1a/English providers/State schools or colleges

School type definition constant. But school system structure has changed over this period. Hard to know from the aggregate data. But is a Broad based measure (c.90+% population). dataHF Page 19 of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx.

#### (2) Fair Access

Page **21** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

# Why is fair access important?

Not always agreement about:

(i) What the 'right' overall level of university entry should be

(ii) or whether certain universities should obtain 'better' outcomes for their students in terms of opportunities

But most agree that the proportions of entrants in certain groups shouldn't vary too much across universities. Or, at least, without good reason (like entry qualifications or subjects).

"Fair access" gets at these issues.

Defining approach of the Trust in early days.

#### 1997-1999: State school distribution

FD/T1a State schools or colleges: 1997-1999 mean Percentage from group

# But no change in relative distribution

Page 28 of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx.

Confidential. dataHE for the Sutton Trust

The relative distribution of this under-represented group across universities has not materially changed.

The most 'exclusive' universities were at 40% of sector in 1997, and the same in recent years.

dataHE

#### **Overall change across the measures**

dataHE

Page **29** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

### What about the ST30 group?

Rather than use quintiles against the mean, we can index a group against the *rest* of the sector.

For the ST 30, state school has improved but occupation and area background no better than late 1990s.

Page **30** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

#### **Post-pandemic: the UCAS data**

including 2021 and
2022.
dataHEI

#### **Post-pandemic: the UCAS data**

Controlling out the changing overall share on this (broader and younger) measure by indexing.

Shows some modest relative improvements in relative representation in 2021, held in 2022.

Page **32** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

### Fair access: The "missing 3,000"

#### The Missing 3000

State school students under-represented at leading universities

August 2004

The missing 3,000 might well be the most influential statistic in fair access.

The Trust used it skilfully to galvanise policy and action.

Was based on ST13, but we use the ST30 (gives very similar value)

#### Preface

The analysis for this paper has been prepared by the Analytical Services Group at the Higher Education Funding Council for England (HEFCE). The Sutton Trust is extremely grateful for their co-operation and excellent work. The views expressed in this paper are those of the Sutton Trust.

dataHE

### **Conditional fair access: 'benchmarks'**

#### FD/T1a State schools or colleges: 1997 Number missing from benchmark

Page 34 of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

### 'Missing' state school 2020

dataHE

Page **35** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

# The "missing 3,000" through time

FD/T1a State schools or colleges: Sutton Trust 30 Numbers missing from benchmark

Around 3,000 state school entrants a year were 'missing' (relative to the benchmark) from ST30 universities in the late 1990s. This rose to over 4,000 in the early 2000s before falling back to around 3,000 2012-2015. Now over 4,500.

Page **36** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

# dataHE
## 'Switching' number for 'fair access'

FD/T1a State schools or colleges

A more generalised statistic is the 'switching' number: How many need to move for everyone to be on their benchmark?

Was around 5,000 in 1997.

Over 6,000 in 2020.

Page **37** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

## 'Switching' as a proportion of entrants

FD/T1a State schools or colleges Proportion needed to switch

But intakes have got larger. And state proportions have grown.

As a % of state school entrants, the number of switchers needed has fallen by a third.

dataHE

Page **38** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

## **Missing low participation at ST30**

FD/T1a Low participation: Sutton Trust 30 Numbers missing from benchmark

Around 1,000 POLAR4 Q1 'missing' from ST30 in 2020. Equivalent figure for late 1990s was around 200.

Page **39** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

## PI low participation 'switchers' increase

FD/T1a Low participation

Across the sector the number of switchers needed for 'fair access' has increased from around 2,000 to almost 5,000 in 2020.

Page **40** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

#### PI low participation 'switchers'

FD/T1a Low participation Proportion needed to switch

A lot of the growth in switchers comes from growth in entry.

As a proportion of Ql entrants has neither got much worse or much better.

dataHE

Page **41** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

## Switchers needed by dimension

Confidential. dataHE for the Sutton Trust

## Switchers needed by dimension (%)

dataHE

Page **43** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

## ST30: % of group missing little changed

Page 44 of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

#### ST30: but numbers affected growing

dataHE

Page **45** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

## (3) Equality

Page **46** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

## **Sector-level equality**

Sector level equality focus on the big life-outcome divide of going to university or not. It tracks the overall equality of the UK sector by different dimensions. We define "underrepresented" categories by entry rates in the mid-2000s.

(1) **Application, success and entry rates**: Different ways of measuring equality

(2) How entry rates have changed Overall, and relative to others – isolated indices

#### (3) How to scale the equality differences: What it says about future priorities

#### **POLAR4** application rates

2006-2022 AR by POLAR4

Application rate is the start of the process.

Records equality of demand/aspiration.

These show large differences

Page **48** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

#### **POLAR4 success rates**

2006-2022 SR by POLAR4

The proportion of applicants who get placed is recorded through the success rate.

This will reflect lots of things (choices, grades, intention, etc.) – but if the admission process was very unfair you would expect to see a signal here.

Page **49** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

#### **POLAR4 entry rates**

2006-2022 ER by POLAR4

The entry rate is the proportion of the population who get a place.

As the outcome it is the key measure and we define underrepresented groups as those below average in the early part of the period.

Q1-Q3 for POLAR.

Page **50** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

#### Success rates generally unimportant

With one or two exceptions (notably region/country) the "success rates" do not vary much and therefore do not drive equality outcomes.

So we concentrate on entry rates.

dataHE

Page **51** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

#### Entry rates by sex

2006-2022 ER by Sex

Men are set as the under-represented group on the sex dimension.

Page **52** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

## Entry rates by ethnic group

#### 2006-2022 ER by Ethnicity

Page **53** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust UCAS self-declared summary groups combined with (ultimately) census and APS estimates.

For ethnic group White and Other are taken as underrepresented.

dataHE

## **Entry rates by region**

2006-2022 ER by Region

We use the declared region of domicile (not postcode based).

Scotland has large below degree sector in HE colleges not in UCAS data. But a good account of chances of entering university-provided higher education.

Page **54** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

## **Entry rates indexed to others: POLAR**

We prefer isolated indexed rates. These are the entry rate of the group relative to the entry rate of all *other* groups.

This reveals true trends in equality, removing effects of changes in overall entry rates *and* the effect of group on average.

POLAR clearly improving.

Page **55** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

## Isolated index for ethnic groups

Ethnic groups are very uneven in population size so the isolated approach is particularly useful.

Young people in the White ethnic group now have less than 75% of the entry rate of other ethnic groups.

Page **56** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

## Isolated index for groups by sex

dataHE - Confidential for the Sutton Trust (20221118) ert4

Confidential. dataHE for the Sutton Trust

Page 57 of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx.

Men have entry rates less than 75% of that of women.

Women are over a third more likely to enter than men.

These differences are wider than in in the 2000's but have stabilised in recent years.

dataHE

## Isolated index for regions

Young people in London are now 45% more likely to enter higher education than peers in other regions, a gap that is growing steadily.

Young people in Scotland, the North East and the South West are around 20% less likely to enter (university) higher education than people in other regions.

Page **58** of 73. Datahe\_long\_equality\_st\_23\_04\_12a.docx. Confidential. dataHE for the Sutton Trust

## Scaling the gaps: numbers

| Distance in abs acceptances from ER wgt avg of others: POLAR4 |         |            |               |       |                      |
|---|---------|------------|---------------|-------|----------------------|
| 2006  | -25,169 | -12,756    | -2,146        | 7,807 | 33,293               |
| 2007  | -24,333 | -12,630    | -2,975        | 8,180 | 32,917               |
| 2008  | -24,404 | -12,557    | -2,761        | 8,233 | 32,788               |
| 2009  | -25,606 | -12,498    | -3,181        | 8,685 | 33,921               |
| 2010  | -25,087 | -13,170    | -2,941        | 9,062 | 33,448               |
| 2011  | -25,481 | -13,457    | -3,281        | 9,352 | 34,327               |
| 2012  | -23,545 | -12,119    | -2,842        | 7,900 | 32,183               |
| 2013  | -23,425 | -12,125    | -2,495        | 7,978 | 31,736               |
| 2014  | -22,748 | -11,118    | -2,339        | 7,773 | 29,954               |
| 2015  | -22,826 | -12,015    | -2,128        | 8,053 | 30,543               |
| 2016  | -22,301 | -11,316    | -2,644        | 7,434 | 30,693               |
| 2017  | -21,594 | -11,473    | -2,360        | 7,157 | 30,197               |
| 2018  | -21,092 | -10,831    | -3,042        | 7,304 | 29,645               |
| 2019  | -20,348 | -11,317    | -2,466        | 7,123 | 29,041               |
| 2020  | -20,884 | -11,435    | -3,591        | 7,480 | 30,589               |
| 2021  | -22,462 | -12,502    | -3,235        | 7,943 | 32,620               |
| 2022  | -21,222 | -12,097    | -2,948        | 7,843 | 30,634               |
| L   |         | 2          | 2             | 2     | 2                    |
|   | $Q_{T}$ | <i>€</i> 2 | $ ho_{ m cr}$ | PA    | $\rho_{\mathcal{S}}$ |

One measure of the equality deficit is how many extra entrants are needed to equal the rates of the *other* groups on that dimension.

dataHE

#### Shortfall in entrants: POLAR Q1

Quintile 1 absolute distance in acceptances from ER wgt avg of others

For POLAR Q1 around 20,000 extra entrants are needed to match the entry rate of the rest of the population. This is lower than in the mid-2000s.

## Shortfall in entrants: White ethnic group

The large population share, low entry rate, and high and rapidly growing comparator rates means the shortfall in young entrants from the White ethnic group is large - now over 70,000 a year, around twice the values at the start of the period
